

Integrity and AI-use declarations

HLD Navigator - AUTOSAR HLD Document Analysis Assistant

Case Study 1 | TechPulse FY-26 Applied AI/ML

Sai Chakrith Sulluru | Amrita Viswa Vidyapeetham

Faculty guide: Dr. D. Palmani | Register/team ID: _____

Version 1.1 | 09 October 2026 | Unsigned submission draft

Unsigned draft - personal verification required

This document records known assistance. It does not claim that the student has personally verified every artifact. The student must review, correct and personally sign the final declarations; the assistant cannot supply student or faculty signatures.

Academic integrity declaration

I will accurately identify source code, public datasets, pretrained models and assistance used. I will not represent synthetic fixtures, agent annotations or mocked results as independent human validation or live measured model performance. I will explain limitations, ownership and individual contributions truthfully.

Known AI/model assistance

OpenAI Codex coding assistant: implementation, tests, debugging, developer review, documentation, presentation and packaging assistance. Separate earlier AI developer/tester chats provided development evidence; this is not independent human architecture review.

BGE-small-en-v1.5 f16: local embedding comparison. Qwen2.5-0.5B-Instruct Q4_K_M: historical failed answer experiment. Qwen2.5-7B-Instruct Q4_K_M: current pinned answer-model experiment, with outcome recorded in the evaluation evidence. No training or fine-tuning was performed.

Personal student verification of implementation, evidence, configuration and artifacts:
_____ (enter accurately).

Signatures
