

HLD Navigator — Synopsis (Unsigned)

Sai Chakrith Sulluru | CB.AI.U4AID23143 | Amrita Viswa Vidyapeetham | Guide: Dr. D. Palmani

Problem and scope

Case Study 1: review supported AUTOSAR-style HLD prose and tables, retain source provenance, build architecture inventories, answer reviewed-field questions, compare revisions and export cited relationships. This is an engineering pilot.

Implementation

FastAPI, Streamlit and SQLite; deterministic extraction and approved-field answering; optional local Qwen/BGE. Original context remains separate from reviewed facts. All free synthesis requires human review; no general semantic guarantee is claimed.

Measured limits

Unchanged public labels: 9 TP, 3 FP, 10 FN across 19 expected facts. Frozen agent-authored synthetic labels: 41 TP, 0 FP, 0 FN; warnings 2 TP, 2 FP, 0 FN. These small development measurements do not establish OEM accuracy.

Approval

Student signature: _____ Date: _____

Faculty synopsis approval/signature: _____ Date: _____

A continuous 5–10 minute live recording and personal code-ownership demonstration remain mandatory actions. This unsigned draft is not administratively eligible.
